GRAVITY SOFTWARE

MULTI-ENTITY

MANAGE MULTIPLE COMPANIES IN JUST ONE DATABASE

STRUGGLING TO MANAGE ALL YOUR COMPANIES?

Traditional accounting systems make it difficult and extremely inefficient to work with multiple companies. Each company is in a separate database, totally isolated. Entering shared expenses becomes a nightmare of inefficiencies and makes consolidated reporting almost impossible.

Gravity Software's™ Multi-Entity features allow organizations to set up multiple legal entities in one database. Gravity has developed one of the most comprehensive multi-company architectures existing today. Consolidate financial and operational reports in less time.

Ready to take the next steps?

Simplify your teams productivity and provide your business with the platform needed to grow.

Features

- All applications can share one common database, the same user interface, and the same platform services

- Enter one bill and allocate expenses to multiple companies on one form

- Whether it's departments, profit centers, or divisions, Gravity provides the flexibility to define specific reporting structures

- Share Vendors, Customer and Chart of Accounts amongst some or all entities

- Create predefined security roles to control access to company data that can be easily assigned or re-assigned as needed

- Define security access down to the field level, and by entity

- Capability of assigning serial or lot numbers to items consumed or built in assembly
